DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 11, 12, & 16-25 are rejected under 35 U.S.C. 103(a) as being unpatentable over www.weichert.com/property/ (hereinafter Weichert) in view of Roderick.

Weichert teaches a web-site with a graphical user interface with two portions. The first portion contains content customized for the web-site; particularly the logo of the company and contact information. The second portion contains property information affiliated with web-site. The property information contains photographs and descriptions of the property.

Weichert teaches the web-site affiliated with a broker, in this case the broker is Jim Weichert. Additionally the property information is accessed in real-time by a user through the affiliated web-site.

Weichert does not specifically teach or illustrate property information (content) coming from a real estate database.

Roderick teaches as old and well known in the art that e-commerce web-sites are comprised of two parts. The first is an HTML document to create the graphical user interface on the Internet and the second part is a database housing product information. The graphical user interface provides users with a means of searching for product information from the database for display to the user.

Art Unit: 3627

It would have been obvious to a person of ordinary skill in the art at the time the invention was made to modify the web-site of Weichert to retrieve the property information from a database as taught by Roderick in order to allow the user to search for information about properties.

Examiner notes the use of "The WayBack Machine" at www.archive.org in finding and presenting the prior art reference Weichert. The Internet Archive is a comprehensive library of Internet sites and other cultural artifacts in digital form. The Wayback Machine is a free service allowing people to access and use archived versions of past web pages within the Internet Archive. Visitors to the Wayback Machine can type in a URL, select a date range, and then will be able to search and view the Internet Archive's enormous collection of web sites, dating back to 1996 and comprising over 10 billion web pages.
